H&N WIND
POWER SYSTEMS BY TIMKEN

LARGE CORRECTIVES
No Time for Downtime

DONE RIGHT THE FIRST TIME

Simply put, we have the same mission…to keep your wind turbines up and running. That's why H&N Wind strives not only to get the job done right the first time, but to do it as quickly and cost effectively as possible. Our ability to fabricate specialized tooling and fixtures "in-house" enables us to respond quickly and efficiently to emergencies: no matter where, no matter when, no matter how challenging.

CRITICAL COMPONENT EXCHANGE

High numbers of unpredicted failures are occurring with wind turbine gearboxes. This fact, coupled with aging turbines and expiring OEM warranties, has created an extraordinary need for large corrective work requiring a high degree of specialized equipment and manpower.

Working 300 feet in the air (often in extreme weather conditions) and tasked to rig and lift equipment upwards of 100,000 pounds, requires solving an extensive list of problems. At H&N we have an experienced team of people dedicated to solving those problems safely, professionally and efficiently.

BENEFITS OF WORKING WITH H&N WIND

- There is no substitute for experience
- In-house fabrication of tooling and fixtures
- Field teams led by expert project managers
- Backed by deep engineering and technical resources
- Large correctives teams strategically located for rapid response throughout the entire United States
